Inputs:

2 counting inputs

The maximum frequency is 20 kHz (20 kHz in the phase discriminator mode); it can be reduced to 30 Hz.

Gate

Static gate input

pulse count mode: no counting, when the input is active

timer mode: Counting when active gate. lo or not activated gate. hi programmable

Reset

Dynamic reset input with the same function as the reset key. Resets the counter to zero, when counting up and sets it to the preset value when counting down

Key

Static key lock input. The keys are locked as long as this input is on. The preselection display key remains active

Interfaces:

The devices can be fitted with the optional RS 232, RS422 or with the RS 485 interfaces. These interfaces can be used to program the devices as well as for remote reading. They are simply controlled by ESC sequences, max. 4800 Baud

LED Preset Counters – Codix 716 / Codix 717 / Codix 717 EX

Programming:

The counters 716/717 are programmed by means of the 4 front keys. The operator guidance on this display allows a simple and intuitive programming. All settings can be carried out by selecting the corresponding parameters in this menu.

The follow modes can be programmed

1. Pulse counter
2. Frequency meter
3. Time meter

Programmable are:

Input polarity:

Positive (pnp) or negative (npn). The selection is valid for all inputs.

Pulse or time counting modes:

- adding with counting; start at 0
- subtracting with counting start at the preset (716) and at preselection 2 (717)
- adding with automatic reset when the preset (716) or the preset 2 (717) is reached
- subtracting with automatic positioning at the preset (716) or preset 2 (717) when 0 is reached

Input types in pulse counter mode:

- Cnt.Dir 1 counting input
- 1 counting direction input
- uP.dn Differential counting
- 1 adding input
- 1 subtracting input

- quad Phase discriminator to connect encoders with 2 signals shifted by 90°
- quad2 Phase discriminator with double pulse processing, to connect pulse sources with 2 signals shifted by 90°

Decimal places:

Data can be displayed with one, two or three decimal places

Factor:

For an optimum matching of the measuring signal, the displayed values can be weighted by a scale factor between 0.0001 and 99.9999.

Output signal:

The function of the output signal can be preselected (independently for both outputs of model 717) as a normally closed, normally open or a negative pulse signal.

Maximum counting frequency:

The maximum counting frequency can be set to 30 Hz or 20 kHz.

Timer:

Counting can be carried out in h, min, s or in h:min:s. The number of decimal places determines the resolution. A resolution up to the ms-range can be achieved.
