GENERAL DESCRIPTION
The ICM8 is designed to act as an ethernet gateway offering multiple
protocol conversion for Red Lion panel meters. With two serial ports (one
RS232 and one RS485) and a 10 Base-T/100 Ethernet Port, the unit performs
protocol conversion, allowing Red Lion panel meters to communicate
seamlessly to the ethernet network. Programming the unit can be accomplished
via the RS232 or the USB Port using Crimson Software. It is important to note
that this device is designed to function with Red Lion panel meters and will not
offer protocol conversion if a Red Lion Product is not connected to at least one
of the serial ports.
The ICM8’S DIN rail mounting saves time and panel space and snaps easily
onto standard top hat (T) profile DIN rail.

SOFTWARE
The ICM8 is programmed with Windows® compatible Crimson software.
The software is an easy to use graphical interface which can be purchased as part
of a kit that includes a manual and cables, or downloaded free of charge from
Redlion website.

SAFETY SUMMARY
All safety related regulations, local codes and instructions that appear in the
manual or on equipment must be observed to ensure personal safety and to
prevent damage to either the instrument or equipment connected to it. If
equipment is used in a manner not specified by the manufacturer, the protection
provided by the equipment may be impaired.

SPECIFICATIONS
1. POWER: 24 VDC ± 10% 200 mA max. Must use a Class 2 or SELV rated
   power supply.
2. COMMUNICATIONS:
   USB/PG Port: Adheres to USB specification 1.1. Device only using Type B
   connection.
   Serial Ports: Format and Baud Rates for each port are individually software
   programmable up to 115,200 baud.
   RS232/PG Port: RS232 port via RJ12
   COMMS Ports: RS485 port via RJ11
   Ethernet Port: 10 BASE-T / 100 BASE-TX
3. LEDs:
   STS – Status LED indicates condition of ICM8.
   TX/RX – Transmit/Receive LEDs show serial activity.
   Ethernet – Link and activity LEDs.
4. MEMORY:
   On-board User Memory: 4 Mbytes of non-volatile Flash memory.
   On-board SDRAM: 2 Mbytes

DIMENSIONS In inches (mm)

Notes:

2. Criterion B: Temporary loss of performance from which the unit self-recoveres.
3. This device was designed for installation in an enclosure. To avoid electrostatic discharge to the unit in environments with static levels above 4 kV precautions should be taken when the device is mounted outside an enclosure. When working in an enclosure (ex. making adjustments, setting switches etc.) typical anti-static precautions should be observed before touching the unit.

6. ENVIRONMENTAL CONDITIONS:

Operating Temperature Range: 0 to 50°C
Storage Temperature Range: -30 to +70°C
Operating and Storage Humidity: 80% max relative humidity, non-condensing, from 0 to 50°C
Altitude: Up to 2000 meters

7. CONSTRUCTION: Case body is black high impact plastic and stainless steel. Installation Category 1, Pollution Degree 2.

8. POWER CONNECTION: Removable wire clamp screw terminal block.

Wire Gage Capacity: 24 AWG to 12 AWG

Torque: 4.45 to 5.34 in/lb (0.5 to 0.6 N·m)

9. MOUNTING: Snaps onto standard DIN style top hat (T) profile mounting rails according to EN50022 -35 x 7.5 and -35 x 15.

10. WEIGHT: 12.3 oz (348g)

POWER SUPPLY REQUIREMENTS

It is very important that the power supply is mounted correctly if the unit is to operate reliably. Please take care to observe the following points:

- The power supply must be mounted close to the unit, with usually not more than 6 feet (1.8 m) of cable between the supply and the ICM8. Ideally, the shortest length possible should be used.

- The wire used to connect the ICM8’s power supply should be at least 22-gage wire. If a longer cable run is used, a heavier gage wire should be used. The routing of the cable should be kept away from large contactors, inverters, and other devices which may generate significant electrical noise.

- A power supply with a Class 2 or SELV rating is to be used. A Class 2 or SELV power supply provides isolation to accessible circuits from hazardous voltage levels generated by a mains power supply due to single faults. SELV is an acronym for “safety extra-low voltage.” Safety extra-low voltage circuits shall exhibit voltages safe to touch both under normal operating conditions and after a single fault, such as a breakdown of a layer of basic insulation or after the failure of a single component has occurred.

HARDWARE INSTALLATION

EMC INSTALLATION GUIDELINES

Although Red Lion Controls Products are designed with a high degree of immunity to Electromagnetic Interference (EMI), proper installation and wiring methods must be followed to ensure compatibility in each application. The type of the electrical noise, source or coupling method into a unit may be different for various installations. Cable length, routing, and shield termination are very important and can mean the difference between a successful or troublesome installation. Listed are some EMI guidelines for a successful installation in an industrial environment.

1. To reduce the chance of noise spikes entering the unit via the power lines, connections should be made to a clean source. Connecting to circuits that also power loads such as contactors, relays, motors, solenoids etc. should be avoided.
2. The unit should be mounted in a metal enclosure, which is properly connected to protective earth.
3. Use shielded (screened) cables for all Signal and Control inputs. The shield (screen) pigtail connection should be made as short as possible. The connection point for the shield depends somewhat upon the application. Listed below are the recommended methods of connecting the shield, in order of their effectiveness:
   a. Connect the shield to earth ground (protective earth) at one end where the unit is mounted.
   b. Connect the shield to earth ground at both ends of the cable, usually when the noise source frequency is over 1 MHz.
   c. Connect the shield to common of the Data Station and leave the other end of the shield unconnected and insulated from earth ground.

4. Never run Signal or Control cables in the same conduit or raceway with AC power lines, conductors feeding motors, solenoids, SCR controls, and heaters, etc. The cables should be run through metal conduit that is properly grounded. This is especially useful in applications where cable runs are long and portable two-way radios are used in close proximity or if the installation is near a commercial radio transmitter. Also, Signal or Control cables within an enclosure should be routed as far away as possible from contactors, control relays, transformers, and other noisy components.
5. Long cable runs are more susceptible to EMI pickup than short cable runs. Therefore, keep cable runs as short as possible.
6. In extremely high EMI environments, the use of external EMI suppression devices is effective. The following EMI suppression devices (or equivalent) are recommended:
   - Ferrite Suppression Cores for signal and control cables:  
     Fair-Rite part number 0443167251 (RLC part number FCOR0000)  
     TDK part number ZCAT3035-1330A  
     Steward part number 28B2029-0A0
   - Line Filters for input power cables:  
     Schaffner part number FN2010-1/07 (RLC part number LFIL0000)  
     Schaffner part number FN670-1.8/07  
     Corcom part number 1 VR3

Visit RLC’s web site at Redlion website for more information on EMI guidelines, Safety and CE issues as they relate to Red Lion Controls products.

COMMUNICATING WITH THE ICM8

The ICM8 is configured using Crimson software. Crimson is available as a free download from Red Lion’s website, or it can be ordered on CD. Updates to Crimson for new features and drivers are posted on the website as they become available. Crimson software can configure the ICM8 through the RS232/PG port or USB/PG port. The USB/PG port is connected using a standard USB cable with a Type B connector.

The driver needed to use the USB port will be installed with Crimson. The RS232/PG port uses a programming cable made by Red Lion to connect to the DB9 COM port of your computer. If making your own cable, refer to the “ICM8 Port Pin Outs” for wiring information.

ETHERNET COMMUNICATIONS

Ethernet communications can be established at either 10 BASE-T or 100 BASE-TX. The Crimson manual contains additional information on Ethernet communications.

RS485 PORT

The ICM8 has one RS485 port.

Please make sure a Red Lion product is connected to either one of the two serial ports for the gateway to be active.

2. The Ethernet port is equipped with data LEDs. If they are blinking, the converter is active and the data is available at the port. Please verify the receiving equipment is properly programmed.

3. If for any reason you have trouble operating, connecting, or simply have questions concerning your new ICM8, contact Red Lion’s technical support. For contact information, refer to the back page of this bulletin for phone and fax numbers.

Note: All Red Lion devices connect A to A and B to B.
LEDS

STS – STATUS LED

The green Status LED provides information regarding the state of the ICM8. This includes indication of the various stages of the start-up routine (power-up), and any errors that may occur.
