

RX SERIES

Robust Photoelectric Sensor **Amplifier Built-in**

Advanced sensor technology

Waterproof

The sensor can be hosed down because of its IP67 construction. The equipment on which the sensor is mounted can be washed without any problem.

Note: However, take care that if it is exposed to water splashes during operation, it may detect a water drop itself.

Robust

The enclosure is robust as it is made of die-cast zinc alloy.

Test input (emission halt input)

Convenient for operation check before start-up. (Excluding the RX2 models)

The sensor operation is checked by interrupting the emission repeatedly and confirming that the output changes accordingly.

Automatic interference prevention function (Retroreflective and diffuse reflective type sensors only)

Two sensors can be mounted side by side because of the automatic interference prevention function. (Excluding the RX2 models)

There is no problem even if the beam of the adjoining sensor is incident.

APPLICATIONS

Detecting person entering stacker crane path

RX-M50

Sensing transparent sheet

RX-PRV500

Confirming car position at parking garage

RX-M10

Detecting engines

RX2-PRVM2

Counting cans

RX-M10

Sensing machine tools

RX4-M5

RX... standard type

• Wide variety

Thru-beam type

Diffuse reflective type

Retroreflective type

RX2... DC 2-wire type

• Wiring reduced by 1/3

Wiring can be completed by using only two, instead of three wires.

• Power supply cost: reduced to 1/30 or less
 Current consumption: 1 mA or less
 An additional power supply for the sensors is not required.

3-wire type

Wiring is time-consuming for the 3-wire sensors and an additional power supply is required.

2-wire type

Wiring is simple with only two wires.

RX3... intelligent type (Orders accepted till December, 2003)

• Self-diagnosis function for internal circuit

In addition to the beam intensity check, the built-in microcomputer self-diagnoses the internal circuit and detects a circuit failure, should it occur.

The following parts ① to ⑥ are monitored constantly.

RX4... heavy duty type

• Durable against oil

IP67g (JEM) protection has been achieved by fluorine resin coating on the enclosure and by using oil resistant protective tube. This sensor can be used in a harsh environment.

IP67g (JEM)

RX

Shock resistance	500 m/s ² acceleration (50 G approx.) in X, Y and Z directions for three times each				
Emitting element		Infrared LED (modulated)	Red LED (modulated)	Infrared LED (modulated)	
Material		Enclosure: Die-cast zinc alloy, Indicator cover: Polyethersulphone, Lens: Polycarbonate (retroreflective type: Acrylic)			
Cable		0.15 mm ² 5-core (thru-beam type: 4-core) oil, heat and cold resistant cable, 2 m 6.562 ft long			
Cable extension		Extension up to total 100 m 328.084 ft is possible with 0.3 mm ² , or more, cable (thru-beam type: both emitter and receiver).			
Weight		Emitter: 70 g approx., Receiver: 70 g approx.	75 g approx.		
Accessories		MS-RX-1 (Sensor mounting bracket): 1 set for emitter and receiver Adjusting screwdriver: 1 pc.	MS-RX-1 (Sensor mounting bracket): 1 set RF-230 (Reflector): 1 pc. Adjusting screwdriver: 1 pc.	MS-RX-1 (Sensor mounting bracket): 1 set Adjusting screwdriver: 1 pc.	

Notes: 1) The sensing range and the sensing object for the retroreflective type sensor are specified for the **RF-230** reflector. Further, the sensing range of **RX3-PRVM3** is the possible setting range for the reflector. The sensor can detect an object less than 0.1 m 0.328 ft away.

- 2) The sensing range of **RX3-D700** is specified for white non-glossy paper (200 × 200 mm 7.874 × 7.874 in) as the object.
- 3) If slit masks (optional) are fitted, an object of 0.5 × 5 mm 0.020 × 0.197 in can be detected.
- 4) Refer to p.290 for details.

SPECIFICATIONS

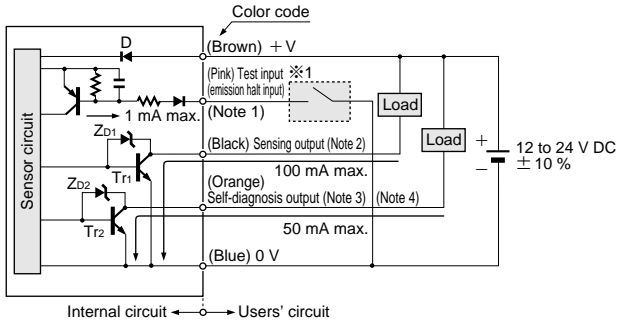

Heavy duty type

Item	Model No.	Thru-beam		
		Cable length 2 m 6.562 ft	Cable length 3 m 9.843 ft	Cable length 5 m 16.404 ft
Sensing range		5 m 16.404 ft		
Sensing object		ϕ 10 mm ϕ 0.394 in or more opaque object		
Repeatability (perpendicular to sensing axis)		0.5 mm 0.020 in or less		
Supply voltage		12 to 24 V DC ± 10 % Ripple P-P 10 % or less		
Current consumption		Emitter: 20 mA or less, Receiver: 25 mA or less		
Sensing output		NPN open-collector transistor <ul style="list-style-type: none"> • Maximum sink current: 100 mA • Applied voltage: 30 V DC or less (between sensing output and 0 V) • Residual voltage: 1.5 V or less (at 100 mA sink current) 0.4 V or less (at 16 mA sink current) 		
	Output operation	Switchable either Light-ON or Dark-ON		
	Short-circuit protection	Incorporated		
Self-diagnosis output		NPN open-collector transistor <ul style="list-style-type: none"> • Maximum sink current: 50 mA • Applied voltage: 30 V DC or less (between self-diagnosis output and 0 V) • Residual voltage: 1 V or less (at 50 mA sink current) 0.4 V or less (at 16 mA sink current) 		
	Output operation	ON under unstable sensing condition		
	Short-circuit protection	Incorporated		
Response time		1 ms or less		
Test input (emission halt) function		Incorporated		
Operation indicator		Red LED (lights up when the sensing output is ON)		
Stability indicator		Green LED (lights up under stable light received condition or stable dark condition)		
Emitting indicator		Red LED (lights up during beam emission)		
Sensitivity adjuster		Continuously variable adjuster		
Environmental resistance	Protection	IP67 (IEC), IP67g (JEM)		
	Ambient temperature	- 25 to + 60 °C - 13 to + 140 °F (No dew condensation or icing allowed), Storage: - 30 to + 70 °C - 22 to + 158 °F		
	Ambient humidity	35 to 85 % RH, Storage: 35 to 85 % RH		
	Ambient illuminance	Sunlight: 11,000 lx at the light-receiving face, Incandescent light: 3,500 lx at the light-receiving face		
	Noise immunity	Power line: 240 Vp, 10 ms cycle, and 0.5 μs pulse width; Radiation: 300 Vp, 10 ms cycle, and 0.5 μs pulse width (with noise simulator)		
	Voltage withstandability	1,000 V AC for one min. between all supply terminals connected together and enclosure		
	Insulation resistance	20 MΩ, or more, with 250 V DC megger between all supply terminals connected together and enclosure		
	Vibration resistance	10 to 500 Hz frequency, 1.5 mm 0.059 in amplitude (10 G max.) in X, Y and Z directions for two hours each		
Shock resistance	500 m/s ² acceleration (50 G approx.) in X, Y and Z directions for three times each			
Emitting element		Infrared LED (modulated)		
Material		Enclosure: Die-cast zinc alloy (Fluorine resin coating), Indicator cover: Polyethersulphone, Lens: Polyallylate, Protective tube sheath: Oil resistant PVC		
Cable		0.15 mm ² 4-core (emitter: 3-core) oil, heat and cold resistant cabtyre cable		
Protective tube length		1 m 3.281 ft	2 m 6.562 ft	4 m 13.123 ft
Cable extension		Extension up to total 100 m 328.084 ft is possible for both emitter and receiver with 0.3 mm ² , or more, cable.		
Weight		Emitter: 175 g approx., Receiver: 175 g approx.	Emitter: 265 g approx., Receiver: 265 g approx.	Emitter: 495 g approx., Receiver: 495 g approx.
Accessories		MS-RX-2 (Sensor mounting bracket): 1 set for emitter and receiver, Adjusting screwdriver: 1 pc.		

I/O CIRCUIT AND WIRING DIAGRAMS

RX-□ RX3-□
RX4-□

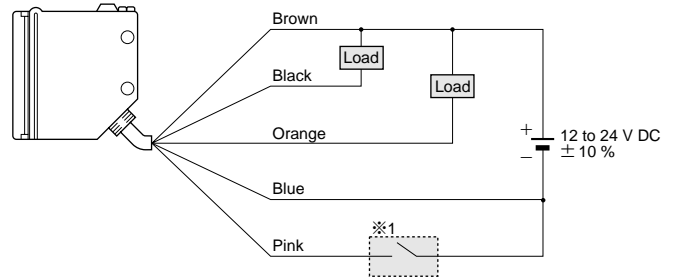

I/O circuit diagram

- Notes: 1) The receiver of the thru-beam type sensor does not incorporate the test input (emission halt input).
2) The emitter of the thru-beam type sensor does not incorporate the sensing output.
3) The emitter of the thru-beam type sensors **RX** and **RX4** does not incorporate the self-diagnosis output.
4) The self-diagnosis output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

Symbols ... D: Reverse supply polarity protection diode
ZD1, ZD2: Surge absorption zener diode
Tr1, Tr2 : NPN output transistor

Wiring diagram

※1

Non-voltage contact or NPN open-collector transistor

- Test input (emission halt input)
[Supply voltage - 2.5 V] or more (4.5 V or more for the **RX3** model): Emission
[Supply voltage - 3.3 V] or less (2.5 V or less for the **RX3** model): Emission halt

Tr: PNP output transistor

Conditions for the load

- 1) The load should not be actuated by the leakage current (1 mA; 0.8 mA for receiver of thru-beam type sensor) in the OFF state.
- 2) The load should be actuated by (supply voltage - 4 V) in the ON state.
- 3) The current in the ON state should be between 5 to 100 mA DC.
(In case the current is less than 5 mA, connect a bleeder resistance in parallel to the load (shown in dotted line above) so that a current of 5 mA, or more, flows.)

RX-D700 RX3-D700 Diffuse reflective type

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200 mm 7.874 × 7.874 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200 mm 7.874 × 7.874 in white non-glossy paper is just detectable at a distance of 700 mm 27.559 in.)

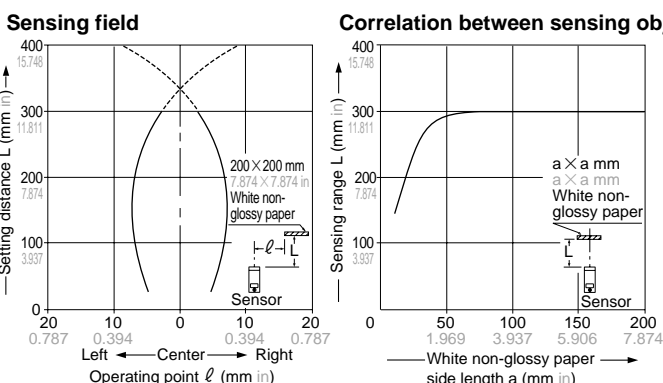

RX-D200R Diffuse reflective type

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200 mm 7.874 × 7.874 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200 mm 7.874 × 7.874 in white non-glossy paper is just detectable at a distance of 200 mm 7.874 in.)

RX2-D300 Diffuse reflective type

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200 mm 7.874 × 7.874 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200 mm 7.874 × 7.874 in white non-glossy paper is just detectable at a distance of 300 mm 11.811 in.)

PRECAUTIONS FOR PROPER USE

Refer to p.1135~ for general precautions.

All models

 This product is not a safety sensor. Its use is not intended or designed to protect life and prevent body injury or property damage from dangerous parts of machinery. It is a normal object detection sensor.

Mounting

- The tightening torque should be 1.17 N·m or less.

Wiring

- The self-diagnosis output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.

RX-RVM5

Glossy object sensing

- Please take care of the following points when detecting materials having a gloss.
 - ① Make L, shown in the diagram, sufficiently long.
 - ② Install at an angle of 10 to 30 degrees to the sensing object.

**RX□-PRVM3 RX□-PRV50
RX2-PRVM2**

Retroreflective type sensor with polarizing filters

- If a shiny object is covered or wrapped with a transparent film such as those described below, the retroreflective type sensor with polarizing filters may not be able to detect it. In that case, follow the steps given below.

Example of sensing objects

- Can wrapped by clear film
- Aluminum sheet covered by plastic film
- Gold or silver color (specular) label or wrapping paper

Steps

- Tilt the sensor with respect to the sensing object while fitting.
- Reduce the sensitivity.
- Increase the distance between the sensor and the sensing object.

RX2-□

Wiring

- Always connect the sensor to the power supply through a load. If the sensor is connected to the power supply directly, the short-circuit protection makes the sensor inoperable (The output stays in the OFF state and no indicator lights up). If this happens, connect the sensor to the power supply through a load. Further, note that the sensor will be damaged if the power supply is connected in reverse without a load.

- Do not connect sensors in series (AND circuit).

- The residual voltage of the sensor is 4 V. Before connecting to a relay, be aware of the actuation voltage of the relay. (Not all 12 V relays may be connected as the load.)

PRECAUTIONS FOR PROPER USE

Refer to p.1135~ for general precautions.

RX3-□

Self-diagnosis output

- The self-diagnosis output turns ON when the incident light intensity is reduced due to the lens being soiled with dust or dirt, due to beam misalignment, or if the internal circuit has failed. If the self-diagnosis output and the operation indicator behave as given in the table below, error is indicated and should be rectified.

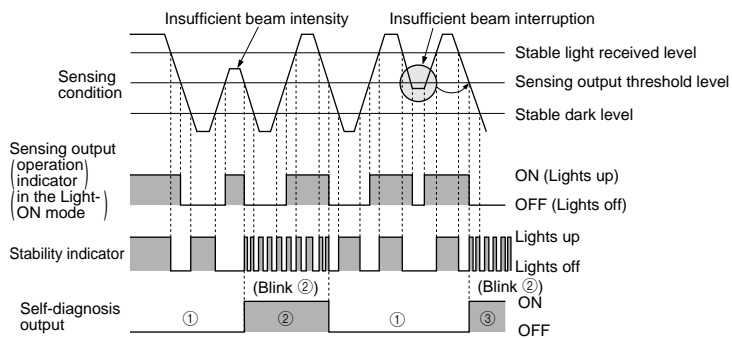

Operation of each part			Failure	Corrective action
Self-diagnosis output	Operation indicator (Red LED)	Stability indicator (Green LED)		
ON	Blinking pattern ① (Note 1)	Lights off	Sensing output wire is disconnected during unstable light received condition or unstable dark condition.	Check the sensing output wire (black lead wire) and the placement of the sensor.
		Lights up	Failure of the sensor circuit. (Failure of the emitting or receiving elements, emitting circuit, amplifier circuit, or output transistor.)	If the sensor does not operate after the power is supplied once again, please contact our office.
	Blinking pattern ② (Note 1)	Lights up / Lights off	Sensing output wire is disconnected.	Check the sensing output wire (black lead wire).
	Lights up / Lights off	Lights up / Lights off	Sensing output is short-circuited and excessive current flows.	Check the sensing output wire (black lead wire) and the load.
	Lights up / Lights off	Blinking pattern ② (Note 1)	Unstable sensing condition due to soiled lens or beam misalignment. (Note 2)	Check the placement of the sensors and the surface condition of the lenses.

Notes:

- There are two blinking patterns of the operation indicator and the stability indicator.

- The time chart for unstable light received condition and unstable dark condition are shown in the following diagram.

- The self-diagnosis output transistor stays in the 'OFF' state during stable sensing.
- When the sensing output changes, if the incident light intensity does not reach the stable light received level or the stable dark level, the self-diagnosis output becomes ON. Further, the self-diagnosis output changes state when the sensing output changes from Light to Dark state. (It is not affected by the operation mode switch.)
- In case of insufficient beam interruption, there will be a time lag before the self-diagnosis output turns ON.
- For the emitter of the thru-beam type diagnosis is only for the emitting element and circuit failure, and the failure is indicated by blinking pattern ①.
- The self-diagnosis output (for sensing output wire disconnection, output transistor failure) may not be generated or changed depending on the fault conditions.
- When the test input is connected to 0 V, the self-diagnosis is inoperable.
- Turning the sensitivity adjuster to the minimum simulates the internal circuit failure condition. Set it at the proper position.

PRECAUTIONS FOR PROPER USE

Refer to p.1135~ for general precautions.

RX4-□

Connection of protective tube connector

- Connect the junction connector securely as shown below. The tightening torque should be 0.98 N·m or less.

When mounted on a plate

When mounted with a female screw

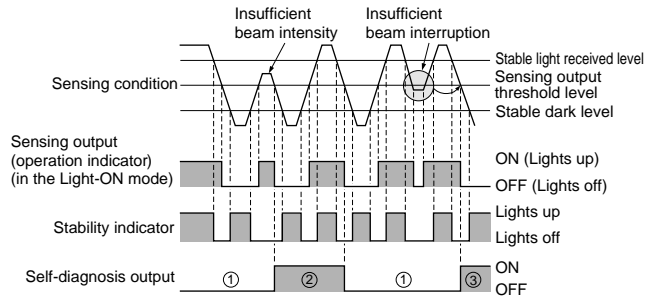

When connected to another protective tube

**RX-□
RX4-□**

Self-diagnosis function

- The sensor diagnoses the incident light intensity, and if it is reduced due to dirt or dust, or beam misalignment an output is generated.

- ① The self-diagnosis output transistor stays in the 'OFF' state during stable sensing.
- ② When the sensing output changes, if the incident light intensity does not reach the stable light received level or the stable dark level, the self-diagnosis output becomes ON. Further, the self-diagnosis output changes state when the sensing output changes from Light to Dark state. (It is not affected by the operation mode switch.)
- ③ In case of insufficient beam interruption, there will be a time lag before the self-diagnosis output turns ON.
